

Every service. Every payout. *One page.*

The complete Repeat Cash schedule — every service Hawaii Wellness Clinic pays you to refer, and exactly what each one is worth. **One service, one flat fee.**

Credited automatically the moment your referral gets care.

BEFORE ANYTHING ELSE

Use your first *and* last name.

When your referral fills out the form, they enter **your first and last name** — that single field is what ties the sale to you. A first name on its own is not enough: we have trainers who share one, and an entry we can't match to a person is an entry **we can't pay**.

Spell it the same way every time, and it lands in your balance on its own.

How the numbers are set

Each fee is roughly **10% of the clinic's standard price** for that service, rounded to a clean figure. For scale: HWC already takes **up to 50% off for veterans** — so a referral fee at 10% sits comfortably inside what the clinic absorbs every day. It's a fraction of that, by design.

Your fee is **the same no matter who you refer**. Members and veterans pay less; that discount comes out of the clinic's side, never out of yours.

Good to know

- **Both names, every time.** First and last on the referral form, spelled consistently.
- **Credited on completion**, not on booking. A no-show credits nothing.
- **Consultations pay too.** \$50 on the first visit, then again when they start treatment.
- **One fee per service**, whatever the dose or package size.
- **Repeat Cash is clinic credit**, redeemable at HWC. Not cash, not transferable.
- **Fees can change.** Your portal balance is always the current figure.

What you *earn*

One name, one fee — the same tag we use in the clinic's system. Dose and package size don't change it.

Regenerative & Biologics

Nano Exosomes	\$500
Nano AER+	\$300
Nano Flow	\$300
Nano AER	\$200
Nano Flex	\$200

Consultations & Hormone

Consultation	\$50
Hormone Therapy	\$25

PLEASE READ — WHAT TRAINERS CAN AND CANNOT SAY

Hawaii Wellness Clinic is a physician-supervised medical clinic. Your role is to **introduce people to the clinic** — not to diagnose, prescribe, recommend a specific treatment, or give medical advice. Whether a service suits someone is decided only by an HWC clinician after evaluation. Please don't promise an outcome, quote a success rate, or tell a member which therapy they need.

Many therapies offered at HWC — including ketamine for mental health, peptide therapy, and compounded weight-loss medications — are prescribed **off-label or are not FDA-approved** for those uses. That is lawful medical practice, but it is not the same as an approved product and should never be described as one.

PLACEHOLDER — DO NOT DISTRIBUTE UNTIL REPLACED

The clinic's regenerative / stem cell regulatory statement goes here. It must be written from the documentation the clinic actually holds and cleared by the medical director and counsel first.

What each one *actually is*

Read this once and you'll recognise most of what walks past you. You never have to explain the medicine — that's the clinic's job.

Regenerative & Biologics

"My knee's been shot for years." "It never healed right."

Worn joints, old injuries and things that never fully healed.
Often members trying to avoid or delay surgery.

PRP

The member's own blood, spun down to concentrate its repair factors, then injected into the problem joint or tendon.

Nano PRP Jelly

PRP in a thicker gel carrier, used where a joint needs cushioning as well as repair.

Nano EX

Exosome injection at 30 billion.

Nano AER

Exosome injection at 50 billion.

Nano AER+

Exosome injection at 90 billion.

Nano Exosomes

The clinic's highest concentration — 180 billion per ml.

Nano Flex

Regenerative injectable. †

Nano Flow

Regenerative injectable. †

Nano DPM

Regenerative injectable. †

Nano Ex Hair Restoration

The same exosome approach applied to the scalp, for thinning or receding hair.

The clinician chooses the product and concentration — you never have to.

Pain & Joint

"I'm stiff for two days after leg day." "My shoulder keeps flaring."

Nagging pain, stiffness and slow recovery between sessions.
No needles, low cost, low commitment — the easiest first referral you can make.

Shockwave Therapy

Pulses of acoustic energy applied to a sore tendon or muscle.
Short session, no downtime.

Class IV Laser

A therapeutic laser held over the painful area. Nothing is broken and nothing is injected.

Vibration Therapy

Targeted mechanical vibration worked into stiff or sore tissue.

Mental Health

"I'm just flat lately." "I haven't been right since deployment."

Low mood, anxiety, trauma, or pain nothing else has touched.
Every service here is physician-supervised and starts with an evaluation.

Ketamine — Mental Health

A monitored ketamine session for depression, anxiety or PTSD.
Normally run as a course rather than a one-off.

Ketamine — Chronic Pain

The same medication at pain-focused dosing, for pain that has lasted a long time.

Stellate Ganglion Block

An injection into a nerve bundle in the neck, used around trauma symptoms and PTSD. Comes up often with veterans.

Vagus Nerve Injection

An injection targeting the vagus nerve, used around stress load and inflammation.

Exomind

A non-invasive device session aimed at mood and mental clarity.
No needles, no sedation.

† Proprietary formulation — ask the clinic for the current description before describing it to a member.

Weight Loss

"I train five days a week and nothing moves."

Weight that will not move despite the work. All prescription programs, each with a metabolic workup and follow-up.

Semaglutide

A weekly GLP-1 injection, prescribed as a course of four.

Tirzepatide

A dual-action medication in the same class, also a course of four.

Retatrutide

The newest option in this class and still investigational — whether it suits someone is entirely the clinician's call.

Weight Loss Booster

A single injection used as a smaller first step for members not ready to commit to a program.

Peptide Therapy

"I don't recover like I used to." "My sleep is garbage."

Recovery, sleep, energy and longevity goals. Popular with older members and anyone training heavy.

Peptide Therapy

A single compounded peptide prescribed for one goal — recovery, sleep, or similar.

Peptide Stack

Several peptides blended into one protocol. Costs more, so it pays more.

IV Therapy & NAD+

"I'm wrecked today." "I'm fighting something off."

Run down, dehydrated, flat or hungover. Quick and inexpensive — the easiest thing in the clinic to say yes to.

IV Therapy

A vitamin and mineral drip in the clinic, around 45 minutes. Myer's Cocktail is the standard one.

IV Therapy — Premium

The larger formulations: Immunity Booster, COVID Rescue, Cold & Flu Plus, Beautify, Hangover Max.

NAD+

An injection or vial used around energy and mental clarity rather than hydration.

Aesthetics & Hair

"I look tired even when I'm not." "My hair's going."

Looking tired, ageing or thinning. Straightforward cosmetic work — no medical history needed to make the introduction.

Botox

Injected in small units to soften lines and wrinkles. Priced per unit at the clinic; you are paid per treatment.

Dermal Fillers

Volume added to the lips or chin for shape.

Sculptra

A collagen-stimulating treatment for facial volume loss, done over several visits.

Hair Restoration

For thinning or receding hair. Sold as a single treatment or a four-treatment package.

Consultations & Hormone

"I don't even know where I'd start."

Not sure what they need — or low energy, libido and sleep.

Consultation

Any member, any reason. If you cannot place someone, send them here: you are paid either way and the clinic works out the rest.

Hormone Therapy

A hormone workup and, where appropriate, ongoing therapy. Comes up around energy, libido, mood and sleep.
